

The NOI Case for Flexible Accommodations

Building-level economics for institutional multifamily portfolios. A matched-pair analysis of operating performance with and without flexible accommodations.

MARKET CONTEXT

National apartment vacancy stands at 7.3% (March 2026), with 35% of properties offering concessions averaging five weeks of free rent^{2,3}. New construction lease-up periods average 12 to 18 months⁵. Sun Belt markets face acute pressure from supply-side oversaturation. These conditions create structural NOI drag that traditional leasing alone cannot resolve within standard hold period timelines. This framework reflects observed data from partnerships including Greystar, the world's largest apartment operator (946,000 units)¹⁰.

14.2% AUSTIN, TX VACANCY ⁸	12.5% PHOENIX, AZ VACANCY ⁹	7.4% MIAMI, FL VACANCY ⁸	7.3% NATIONAL AVG ²
38 days AVG. TIME TO LEASE ⁴	12-18 mo LEASE-UP PERIOD ⁵	35% W/ CONCESSIONS ³	5 wks AVG. FREE RENT ³

ADDITIVE NOI IMPACT

Flexible accommodations do not replace traditional leasing. They generate incremental NOI from units that would otherwise produce zero revenue during vacancy or lease-up. The operator's existing program continues unchanged. Andes adds a revenue layer on top.¹

METRIC	TRADITIONAL OPERATIONS	+ ANDES FLEX LAYER	COMBINED PORTFOLIO
Units	180 occupied (90%)	20 vacant units activated	200 total
Annual NOI	\$1,880,000	+\$378,000	\$2,258,000
NOI Per Unit	\$10,444	\$18,900 (flex units)	\$11,290 (blended)
NOI Uplift		+20.1%	

Assumptions: 200-unit Sun Belt Class B | \$1,500/mo avg rent | 10% structural vacancy (20 units) | 42% OpEx ratio | Flex units at \$2,500/mo avg (1.67x premium) | 90% flex occupancy | 30% flex OpEx | FF&E at \$10,000/unit

Methodology. Matched-pair analysis, Q4 2023 through Q1 2026. Baseline: 12 months pre-deployment. Comparison: 12 months post. Revenue and OpEx tracked at unit level. Market baseline: CoStar submarket averages. The 20 activated units generated \$378K in net NOI from units that were producing zero revenue.¹

PER-UNIT INCOME: FLEX VS. VACANT (24 MONTHS)

Cumulative per-unit NOI differential over 24 months: +\$37,800.¹
Shaded area = income captured by flex that vacant unit forfeits.

BUILDING VALUATION IMPACT

METRIC	TRADITIONAL	+ ANDES LAYER
Traditional NOI	\$1,880,000 at 5.0%	\$1,880,000 at 5.0%
Flex NOI		\$378,000 at 6.0%
Building Value	\$37,600,000	\$43,900,000 +\$6.3M

Sum-of-parts: Traditional income at market cap (5.0%). Flex income discounted at +100bp (6.0%). Even with the risk premium, the building gains \$6.3M in value. At parity: +\$7.6M.

VALUATION IMPACT (100BP STR PREMIUM ON FLEX INCOME ONLY)

Traditional NOI valued at market cap rate. Flex income discounted separately at +100bp. Building value = sum of parts.

INCOME STREAM	ANNUAL NOI	CAP RATE	IMPLIED VALUE
Traditional operations (180 units)	\$1,880,000	5.0%	\$37,600,000
+ Andes flex layer (20 units)	\$378,000	6.0% (w/ 100bp premium)	\$6,300,000
Combined building value	\$2,258,000	5.14% (blended)	\$43,900,000

Value created: +\$6.3M over baseline (\$43.9M vs \$37.6M). At parity (5.0% on all income): +\$7.6M.

CapEx: 20 units x \$10K = \$200K. Payback: 6.3 months. Year 1 cash-on-cash: \$378K / \$200K = 189%.

VALUE CREATION MECHANISMS

Accelerated Stabilization

Flex units generate revenue during lease-up. Traditional leasing continues in parallel. Industry avg stabilization: 12-18 months⁵. With flex: 6-9 months observed¹.

50-67%

FASTER STABILIZATION

Permanent NOI Increment

The income is structural, not cyclical. Flex units absorb vacancy that traditional leasing cannot fill within standard hold periods. At 5.0% cap, each \$100K in incremental NOI = \$2.0M in asset value.

+20%

NOI UPLIFT (200-UNIT BASIS)

FF&E-Only CapEx

No structural renovation. FF&E at \$8,400 to \$12,400 per unit⁶. No permits, no construction risk. Units revert to traditional leasing at zero cost.

6.3 mo

PAYBACK PERIOD

"This is the solution we've been looking for. Well thought out, investor-friendly, and doesn't add work to our plate."
